## Remarks:

This application was filed on 16 - 10 - 2000 as a divisional application to the application mentioned under INID code 62.

- (54) Universal modern for digital video, audio and data communications
- (57) A universal modern has a software-configurable modulator/demodulator which accommodates different modulation formats such as those associated with terrestrial, cable, phone line, satellite and wireless communications to be transmitted and received through a single device in which the modern has reconfigurable logic to accommodate the format of the signals being received or transmitted. In one embodiment, the system tracks channel noise and changes modulation format at both the transmit and receive sides of the system through the use of a controller that controls both sides.
